

Are Franklin WH Batteries Compatible with Enphase Solar Microinverters?

Yes, FranklinWH batteries are compatible with Enphase solar microinverters. As an AC-coupled system, the Franklin Home Power (FHP) system can be integrated into existing solar setups with various inverter brands, including Enphase.

However, it's important to note that while Enphase IQ microinverters can work with third-party batteries like FranklinWH for charging and discharging, they may not provide backup power during a grid outage unless paired with Enphase's own storage solutions.

Therefore, if your goal is to have backup power during outages, you might want to consider Enphase's storage solutions, such as the Enphase IQ Battery, which are designed to seamlessly integrate with their microinverters and provide backup capabilities.
